JR AUTOMATION®
A Hitachi Group Company

A SMARTER WAY TO AUTOMATE

At JR Automation, we accelerate what's possible with intelligent, connected manufacturing solutions that adapt, evolve, and scale at your speed of business. Through a partnership built on innovation and results, we unify manufacturing consulting, advanced automation, support services, and data-driven insights to transform the way you manufacture. From concept to continuous improvement, our integrated solutions help you build smarter, scale faster, and seamlessly evolve for what's next.

Smarter By Design

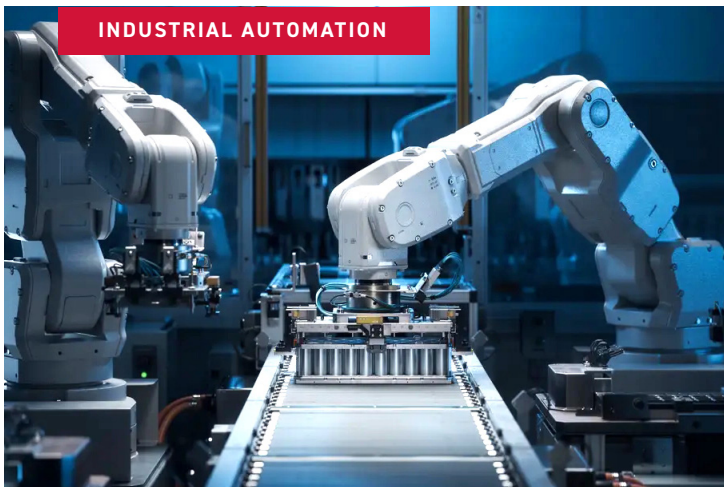

Early decisions shape better outcomes. That's why we partner with you from the start—to minimize risk and improve production readiness from day one, tailoring our approach to support your goals of maximizing efficiency and accelerating timelines.

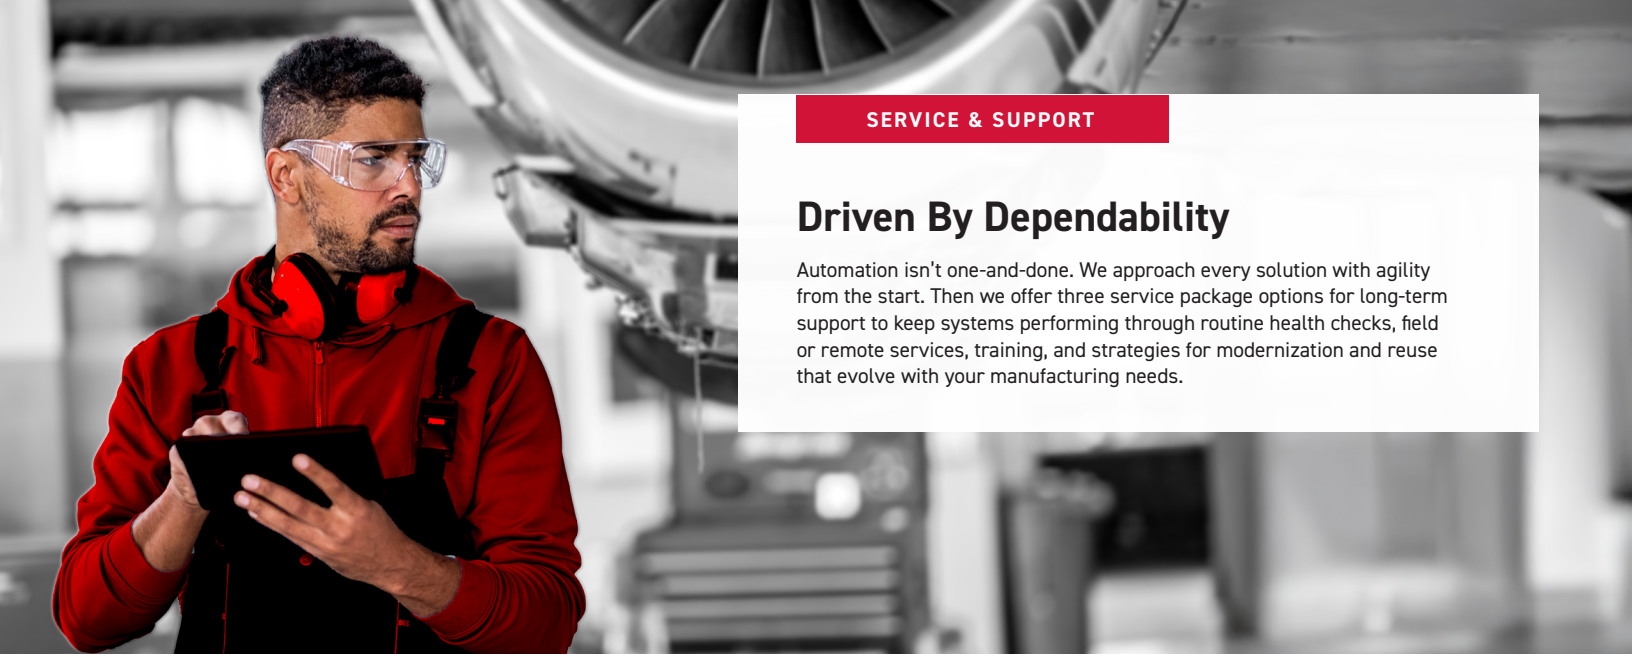

- Strengthen design for manufacturability with a structured, scalable approach
- Boost engineering efficiency and project outcomes through tailored consulting
- Ensure smoother automation outcomes with expert DFM guidance and statement of work development

Advanced By Innovation

Your goals aren't off-the-shelf and your automation system shouldn't be either. We deliver cost-effective, tailored systems built around your targets, engineered for quality, safety, and speed—and backed by real-time analytics.

- Shift from one-off automation projects to long-term, strategic partnerships
- Leverage advanced tech—such as robotics, AI, IoT, and smart conveyance
- Integrate systems that scale with your business and unlock new value
- Improve safety, throughput, and consistency across your entire operation

SERVICE & SUPPORT

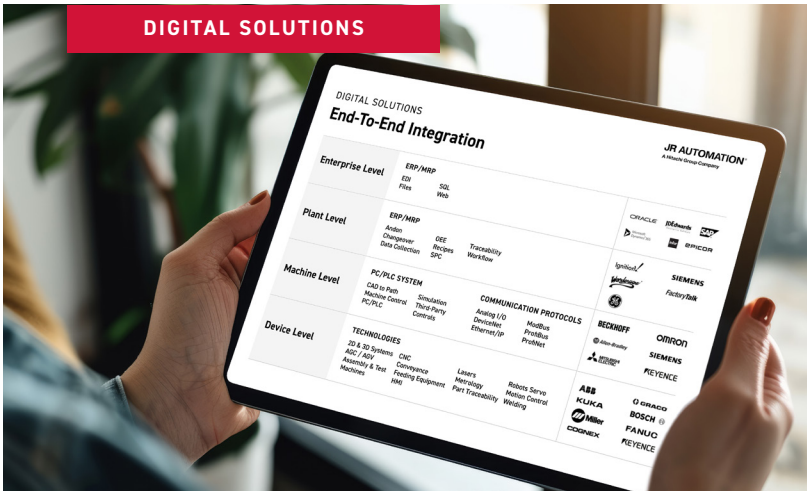

Driven By Dependability

Automation isn't one-and-done. We approach every solution with agility from the start. Then we offer three service package options for long-term support to keep systems performing through routine health checks, field or remote services, training, and strategies for modernization and reuse that evolve with your manufacturing needs.

Powered By Insights

Data is the thread that connects it all. Our internal team can leverage your existing SCADA, MES and/or HMI systems and connect your manufacturing by integrating data from each machine, providing actionable insights to optimize operations, supply chain management, warehouse tracking, and even to CRM software. Experience greater precision, faster turnaround times, and valuable insights—giving you the confidence to make smarter decisions and stay ahead in a competitive market.

DIGITAL SOLUTIONS

POWERING WHAT'S POSSIBLE

Better outcomes don't happen by chance. They're engineered through insight, experience, and a commitment to evolving with you. As part of the Hitachi Group, we bring the power of a global technology leader to every solution—bridging the physical and digital to help you build smarter, adapt faster, and achieve more.

2K+ TALENTED EMPLOYEES

80% Work in a Technical Role

2M+ SQUARE FEET

Available Build Floor Space

20+ GLOBAL FACILITIES

Technical Expertise Across 3 Continents

United States
